

AdVise API & Streamlit reference

FastAPI: AdVise API (OpenAPI version 0.1.0)

Streamlit frontend: multipage app under AdVise/app/

1. FastAPI HTTP endpoints

Source: docs/api/openapi.json (exported from FastAPI). Interactive docs when the server runs: GET /docs and GET /redoc. Paths in the table wider than the column are clipped; see OpenAPI for full path text.

Method	Path	Summary / description	Tags
GET	/v1/status	Root	
GET	/v1/status	Get Ads	Ads
POST	/v1/status	Create Ad	Ads
GET	/v1/status	Get Audience	Audience
POST	/v1/status	Create Audience	Audience
GET	/v1/status	Get Campaigns	Campaigns
POST	/v1/status	Create Campaign	Campaigns
GET	/v1/status	Get Campaign	Campaigns
PUT	/v1/status	Update Campaign	Campaigns
DELETE	/v1/status	Delete Campaign	Campaigns
GET	/v1/status	Reserved	extension
GET	/v1/status	Get Predictions	Predictions
POST	/v1/status	Create Prediction	Predictions
GET	/v1/status	Service Status	core
GET	/v1/status	Get Training Dataset	Training Dataset
POST	/v1/status	Create Training Dataset	Training Dataset
GET	/v1/status	Get Ads - Return ad creative records from the PostgreSQL ads table.	
GET	/v1/status	Get Audience - Return audience records from the PostgreSQL audience table.	
GET	/v1/status	Get Campaigns - Return campaign records from the PostgreSQL campaigns table.	
GET	/v1/status	Get Enums - Dropdown values sourced from DISTINCT ``training_dataset`` columns when available,	
GET	/v1/status	Get Prediction Run	predictions
GET	/v1/status	Get Predictions - Return prediction records from the PostgreSQL predictions table.	
POST	/v1/status	Preview Prediction	predictions
GET	/v1/status	V1 Status - Return backend health information and basic runtime limits.	

2. Streamlit frontend (pages & backend calls)

Run: streamlit run AdVise/app/app.py (from repo root). Pages appear in the sidebar by filename order.

Main app (streamlit run app.py)

File: AdVise/app/app.py

Page title: AdVise Overview (root)

Backend usage: (none from app.py; navigation only)

Sidebar page

File: AdVise/app/pages/1_Home.py

Page title: AdVise Home

Backend usage: (none)

Sidebar page

File: AdVise/app/pages/2_Campaign_Input.py

Page title: Campaign Input

Backend usage: GET {API_URL}/v1/status (health); GET {API_URL}/v1/meta/enums (form dropdowns); POST {API_URL}/v1/predictions/preview (JSON body + optional creative_image_base64)

Sidebar page

File: Advise/app/pages/3_Prediction_Results.py

Page title: Prediction Results

Backend usage: (reads st.session_state from preview; documents GET {API_URL}/v1/prediction-runs/{{run_id}} for parity)

HTTP client helpers

File: Advise/app/api_client.py

Page title: -

Backend usage: API_URL env (Compose: http://back:8000; local default http://localhost:8008)

Regenerate this PDF after API changes: python3 scripts/export_openapi.py && python3 scripts/generate_api_streamlit_pdf.py
